Product Requirements Document (PRD)

Vision

Build an AI-powered universal AutoScroll overlay for Android that works across supported apps using Accessibility and Overlay permissions. The system adapts to each user's reading pace using on-device machine learning.

Target Users

Students, professionals, researchers, ebook readers, accessibility users, and anyone reading long-form content.

Core Features

Universal overlay, smooth and stepped scrolling, adaptive speed, AI personalization, reading calibration, gesture controls, break reminders, reading profiles, privacy-first processing.

ML Strategy

Start with a generalized model trained on anonymized aggregate reading behavior from millions of reading sessions. After installation, continuously personalize the model using on-device learning.

Tech Stack

Kotlin, Jetpack Compose, MVVM, Hilt, Room, DataStore, Accessibility Service, SYSTEM_ALERT_WINDOW, WorkManager, Coroutines, TensorFlow Lite (LiteRT), Android Keystore, Play Integrity API.

Security

Encrypt sensitive local data, least-privilege permissions, no reading content uploaded without explicit opt-in, HTTPS/TLS for optional cloud services, R8/ProGuard.

Success Criteria

Natural adaptive reading, low battery usage, privacy, modular architecture, production-ready quality.
